Executive Summary

Data analytics & AI automation specialist with expertise in **Data Analysis, Tableau & Power BI Dashboards, SQL & Data Modeling, Databricks PySpark, and Generative AI Agent Automation**. Driven to ensure **Data Quality**, deliver **Insightful Analytics, KPI Dashboards, and Workflow Automation**.

Work Experience

Deloitte USI | *Audit Analyst — Audit & Assurance*

Sept. 2024 - Present

- Built and modified 50+ Power BI and Tableau Dashboards for audit teams across 10+ fortune 500 clients, accelerating audit sampling processes.
- Performed 50+ financial data reconciliations using Databricks PySpark, SQL, including data cleaning, embedding rigorous data quality checks to ensure data completeness and enhance audit insights.
- Automated reporting workflows with Excel & VBA Automation, cutting manual effort by 40% and streamlining audit documentation and review cycles.

Zebronics | *Business Analyst Intern — MIS E-Commerce*

Apr. 2024 – Aug. 2024

- Automated market research processes with Python, reducing manual effort by 90% via Workflow Automation and reusable scripts for competitive data collection and processing.
- Generated 10+ e-commerce market reports by cleaning scraped data, writing SQL queries, performing Exploratory Data Analysis (EDA), and applying statistical techniques; delivered pricing and market segment insights to sales team.
- Automated Excel MIS reporting with VBA Automation and integrated Tableau Dashboards, improving cross-team reporting efficiency by 80%.

Projects

Audit AI Agent | *OpenAI Agents SDK, Claude, Databricks PySpark*

Mar. 2026 – Apr. 2026

- Architected a multi-agent AI audit pipeline (4 specialist sub-agents + orchestrator) over PySpark, automating 12 journal-entry fraud tests across datasets with hundreds of thousands of rows - cutting manual audit sampling effort from days to under an hour.
- Engineered a cross-agent corroboration system where account, amount, temporal, and user-behavior agents cross-feed flagged journal numbers, users of interest, etc, surfacing highest-risk entries with a weighted composite risk score (amount, entry type, period, user rarity).
- Built a PySpark-native risk scoring engine with hierarchical flagging, percent-rank windowing, and cross-test bonus logic - replacing slow pandas workflows and enabling scalable fraud analytics on Databricks with no data movement.
- Delivered structured audit outputs (risk-ordered Excel workbook, narrative fraud story docx) via a ReAct-protocol (Reasoning then Acting) agent loop with exponential backoff and shared flagged-cache - making findings directly presentable to an engagement partner.

Engrain – AI Reading Assistant | *FastAPI, Gemini, Docker, GCP, [Link to Site](#)*

Jan. 2026 – Feb. 2026

- Built a full-stack AI learning platform with semantic search and intelligent highlight management, reducing manual note-organization effort by over 80 % using vector embeddings.
- Engineered a multi-mode AI chat system (Brainstorm, Socratic, Implementation) with a 3-tier hierarchical memory compression — enabling context-aware conversations across long reading sessions.
- Designed a modular microservice backend (8 focused services, SOLID principles), cutting codebase complexity from 2,200 lines of monolithic code to a clean, scalable architecture.

- Deployed production-ready system on Google Cloud Run with Docker, CI/CD via Cloud Build, and personalized learning paths adapting to user goals and daily rhythm.

AI Transaction & Invoicing Bot | *AI Agents, Python, Supabase, [Link to Bot](#)*

July. 2025 – Aug. 2025

- Built AI-powered multilingual bot to convert sales messages into structured transactions, eliminating 90% manual data entry.
- Automated PDF invoice generation with GST, reducing invoice creation time from minutes to 5 seconds.
- Implemented on-demand business intelligence (text summaries, trend detection, CSV export) for data-driven decision making.

AI-Powered E-Commerce Intelligence Tool | *AI Agents, Python*

May. 2025 – Jun. 2025

- Developed an automated multi-platform scraping system using N8N (then using python) to research product categories across Amazon and Flipkart.
- Generated comprehensive business intelligence reports with trend analysis and market insights enabling data-driven pricing strategies. Reducing manual market research time by around 80%.
- Automated real-time price monitoring through advanced web-scraping, reducing team effort by up to 90% when checking current product prices.

Education

Vellore Institute of Technology, Chennai

Electrical and Electronics Engineering, CGPA 9.27

Chennai, India

Aug. 2020 – May 2024

Courses and Certifications

Deploy Gen AI & Agentic AI at Scale | *GenAI, GCP, AWS*

Nov. 2025 – Jan. 2026

Data Analytics for Business Professionals | *Python, Statistics*

Jun. 2025 – Jun. 2025

Master AI Agents with OpenAI Agents SDK, CrewAI, MCP | *AI Agents*

Apr. 2025 – May. 2025

Master Microsoft Excel Macros and Excel VBA | *Excel Automation*

Oct. 2024 – Nov. 2024

Tableau Advanced: Master Tableau in Data Science | *Tableau*

Mar. 2023 – May. 2023

Technical Skills

Programming Languages: Python, PySpark, SQL, C/C++.

AI & Automation: OpenAI Agents SDK, CrewAI, N8N Workflow Automation, Machine Learning, Macros & VBA.

Data & Analytics: Tableau, Power BI, Microsoft Excel, Databricks, Data Cleaning, Data Analysis, Data Visualization.

Other: 180+ Questions Solved on LeetCode, Extract Transform Load (ETL), Predictive Modelling.
